Message Max Lines

1

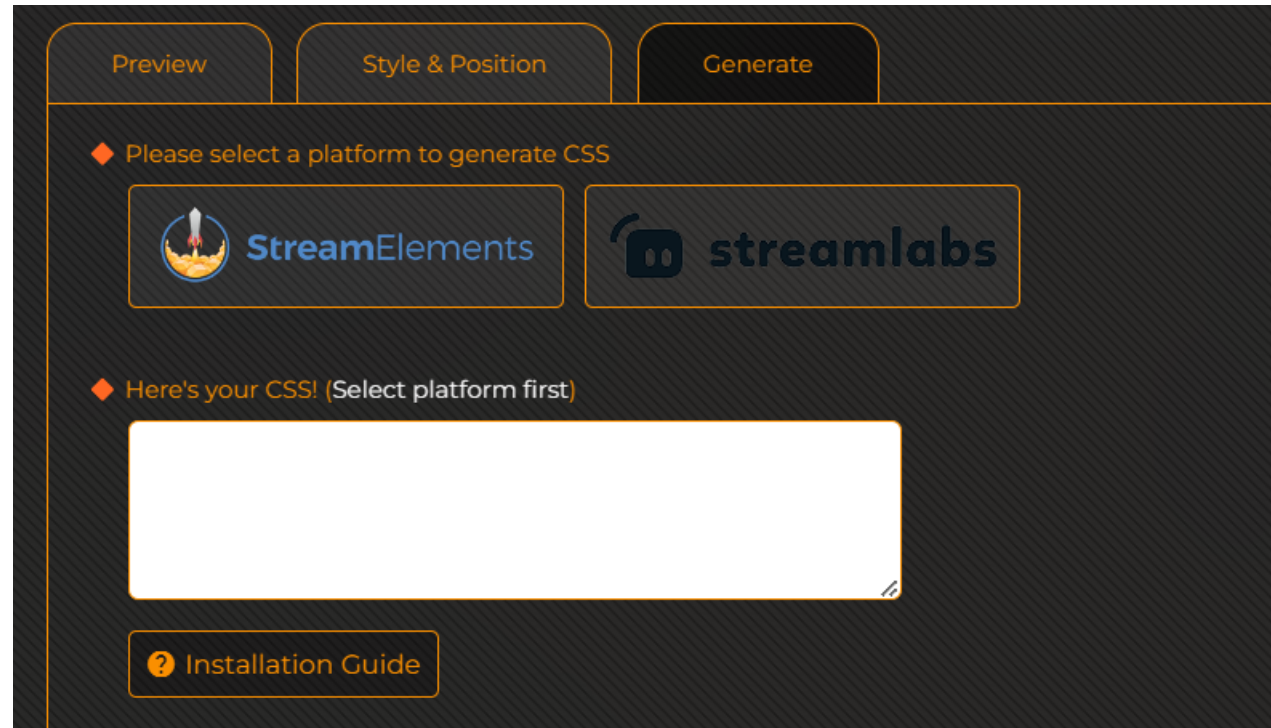

lines

Field	dEscription
Font	changes the font, not case sensitive but make sure the spelling is right. Uses what font you have installed on your computer.
Color	Changes the color, if you disable it for username, it will use the default viewer color (like on twitch). Idk how youtube works tho
Size	Change the font size, you can also scroll up/down while dragging the elements to resize it.
Style	Bold <i>italic</i> <u>underline</u> left                      center                      right
Rotation	Rotates the thing
Max Width	Max width of the element (ENABLE GUIDE OUTLINE TO SEE)
Max Lines	How many lines to show in message

Click on either StreamElements or StreamLabs to generate the CSS

Click the generated CSS in the text area to automatically copy the code.

Proceed to installation (installation guide button brings you to this same manual)

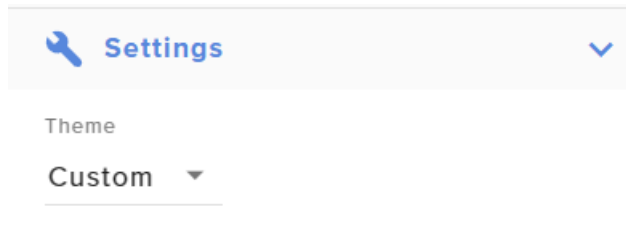

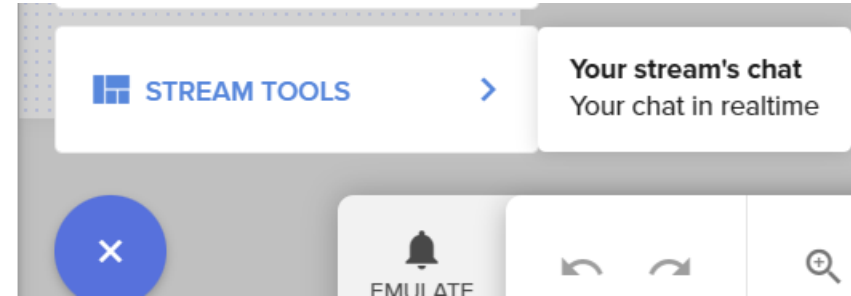

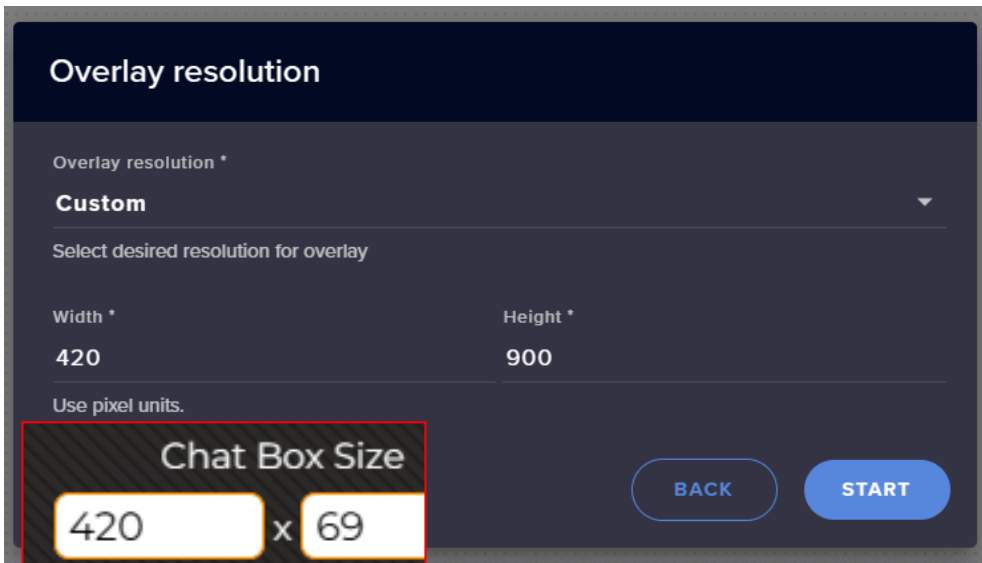

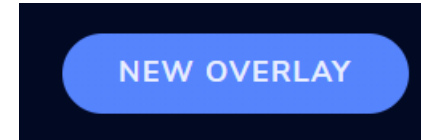

The image shows a web interface for generating CSS. At the top, there are three tabs: "Preview", "Style & Position", and "Generate". Below the tabs, there is a prompt: "Please select a platform to generate CSS". Under this prompt, there are two buttons: "StreamElements" (with a rocket icon) and "streamlabs" (with a Twitch logo icon). Below these buttons, there is another prompt: "Here's your CSS! (Select platform first)". Under this prompt, there is a large, empty white text area for displaying the generated CSS. At the bottom left, there is a button labeled "? Installation Guide".

INSTALL FOR STREAMELEMENTS

# Install for StreamElements (part 1)

Tldr: make sure your chat widget has the same or larger width as your EZCG chat box size

- 1 Go to [StreamElements.com/dashboard/overlays](https://StreamElements.com/dashboard/overlays)
- 2 Click NEW OVERLAY (top right)
- 3 Custom overlay resolution, set width to the same as your chat box (HEIGHT DOESN'T MATTER, PUT MORE TO SHOW MORE CHATS)
- 4 Click the + then Stream Tools then your stream's chat
- 5 Set theme to custom under settings

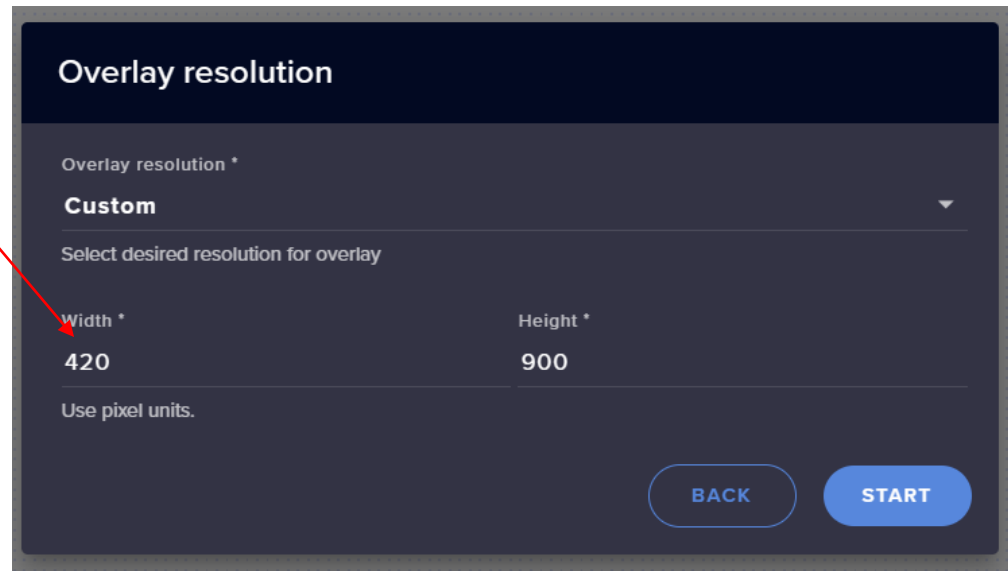

## Install for StreamElements (part 2)

- 6 set the widget width and height to match your overlay resolution just now

Position, size and style

Width		Height	
420	PX	900	PX

Overlay resolution

Overlay resolution \*

Custom

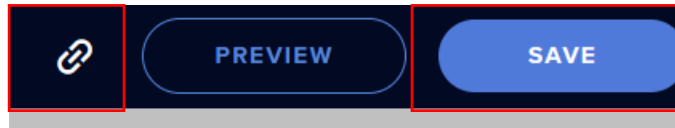

Select desired resolution for overlay

Width *	Height *
420	900

Use pixel units.

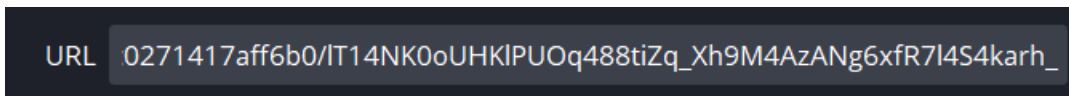

BACK START

- 7 Save and copy the overlay URL

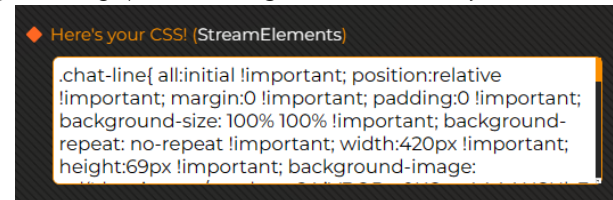

PREVIEW SAVE

- 8 use browser source in obs and paste the overlay url there.

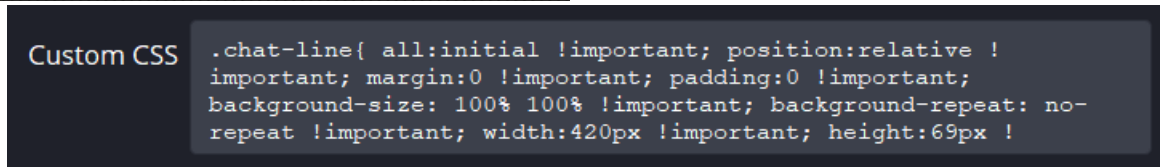

URL 0271417aff6b0/IT14NK0oUHKIPUOq488tiZq\_Xh9M4AzANg6xfR7l4S4karh\_

- 9 finally, paste the generated CSS just now to the Custom CSS field

Here's your CSS! (StreamElements)

```
.chat-line{ all:initial !important; position:relative !important; margin:0 !important; padding:0 !important; background-size: 100% 100% !important; background-repeat: no-repeat !important; width:420px !important; height:69px !important; background-image: url('...') !important; }
```

Custom CSS

```
.chat-line{ all:initial !important; position:relative !important; margin:0 !important; padding:0 !important; background-size: 100% 100% !important; background-repeat: no-repeat !important; width:420px !important; height:69px !important; background-image: url('...') !important; }
```

- 10 done, enjoy your new chat!

INSTALL FOR STREAMLABS

# Install for StreamLabs (part 1)

1

Go to

[streamlabs.com/dashboard#/chatbox](https://streamlabs.com/dashboard#/chatbox)

2

change theme to clean

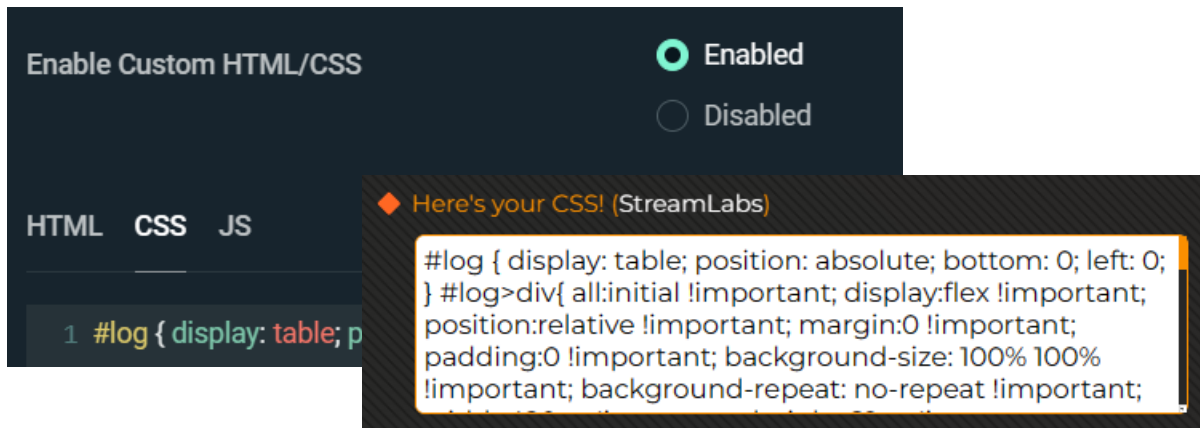

3

(optional) check always show messages

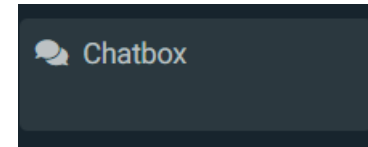

4

enable custom html/css then go to CSS and paste the generated code then SAVE SETTINGS

5

open StreamLabs OBS then add a Chat Widget

6

done, enjoy your new chat!

This is just a fun mini-project I made, if anything is broken please don't hurt me

This guide is still valid and usable as of 20<sup>th</sup> feb 2023
